# Large Breed Puppy 32™

Precise CARE for large breed puppies from weaning to 15 months of age

## Immunity Booster

Your MAXI puppy's immune system needs to be more protected during the first year of life, as it gradually loses the immunity transmitted by its mother. Nutrients like MOS† and antioxidants such as vitamin E (500 mg/kg) & vitamin C (200 mg/kg), taurine and lutein help stimulate the production of antibodies and build the immune system of your MAXI puppy.

## Building Strong Joints

Even at an early age, it is important to start protecting the joints of your MAXI puppy.

The addition of glucosamine (780 mg/kg) and chondroitin (220 mg/kg) contributes to the construction and protection of healthy joints for your puppy. Omega 3 essential fatty acids from anchovy oil help to limit inflammation of the joints.

## DHA: Brain Development

Proper brain development and other vital functions are critical in the MAXI puppy.

Very high levels of EPA and DHA (0.30%) from anchovy oil promote the healthy development of your puppy's brain and nervous system, as well as motor skills and sensory perception.

## Easy to Digest

The MAXI puppy's digestive abilities develop with age. To help prevent gas and diarrhea as their system matures, Large Breed Puppy 32™ incorporates prebiotics (FOS\* & MOS†) and psyllium, for easy digestion for your MAXI puppy's sensitive stomach.

\*FOS - Fructo-oligosaccharides

†MOS - Mannan-oligosaccharides
